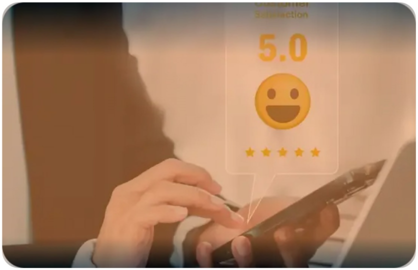
Post-Production

The Final Touch . The First Sign of Excellence

Comprehensive Post-Production Solutions Tailored for your Business

Think of any video you liked: the aesthetic visuals, the vibrant colors, the dynamic pace, the crisp sound effects and music, and most importantly the memorable impact now that you are thinking of it, imagine bringing that to your target audience.

That's the art of post-production, and that's what you bring to your target audience when you opt for Transbridge post-production services: a polished, refined visual narrative that connects you with your customers, drives engagement, and ensures the highest ROI.



Let's make your video awesome!

Transbridge brings a diverse, global network of talented sound engineers and sound designers, visual effect artists, audio mixers, and motion graphics designers to transform raw footage and/or preliminary animations into stunning videos while preserving your vision and brand identity and ensuring your brand message gets across to your target audience.

We are known for our scalable and budget-tailored solutions: no matter how big or small your video project is, we customize our automated workflow and resources to best fit your timeline and budget constraints while delivering uncompromised-quality post-production services.

What we Offer?

01 Video Editing

This is the initial step and is indispensable to guaranteeing a cohesive, smooth narration flow. It includes selecting, arranging, cutting, and trimming of raw footage while adding appropriate transitions. Similarly, in case of animated videos, our video editors work on adjusting timing of movements, extending or trimming scenes, and refining transitions.

02 Sound Design

This involves the art of creating the soundscape that highlights and elevates the visual ambience; our sound designers create all the auditory elements making sure they match the visual content and evoke the right emotion; for example, the sound of crashing waves in a real-estate promotional video showcasing beach houses. This also includes sound effects and foley—reproduction of everyday sound effects such as footsteps, breaking glass, paper rustling, etc.

03 Sound Editing

Collaborating with sound designers, our talented sound editors work on selecting licensed soundtracks and background music that best match the visual content, adding and layering all audio elements including dialogue/voiceover, music, and sound effects while making sure all sounds are precisely synchronized and perfectly timed with the actions on screen and ensuring there is no background noise, delivering clear, high-quality audio that magnifies the impact of visual storytelling.

04 Sound Mixing

Sound mixers step in right after the sound editing process is completed, where they assemble all the audio elements edited by the sound editor and mix them into the final soundtrack. Utilizing top-notch technology, our creative sound mixers adjust and balance the volumes and tweak the frequencies of sound effects, dialogue/voiceover, music, and all audio elements to ensure a clear and cohesive final soundtrack that reinforces the immersive visual experience, while ensuring the sound mix meets the specific technical requirements of the distribution channels.

05 Color-Grading

Our color artists not only understand the emotional effect of different colors but also have profound knowledge of the cultural relevance of color schemes. Working frame by frame, they fine tune color balance, brightness, and contrast to ensure consistency throughout the video and subtly impact the look and feel of each scene to match the intended mood, adding to the visual aesthetics of the video, while aligning colors with the brand color scheme to maintain brand identity.

06 Visual Effects (VFX)

This is where your most creative, most imaginative ideas are made possible, thanks to the revolutionary advances in VFX technology that Transbridge embraces. Whether it is a pharmaceutical explainer video using animation to demonstrate how the drug works on a molecular level or a virtual tour of the design of a construction project that is yet to be built, VFX not only add to the visual appeal of the video but also act as a cost-efficient, powerful tool to communicate complex information in an intuitive and engaging way.

07 Motion Graphics and Titles

Bringing abstract shapes, text, logos, graphs/charts into life through stylistic animations, our motion graphic designers are adept at utilizing professional software to produce dynamic visual content. For instance, an E-learning video explaining how to use Excel can be far more engaging when motion graphics are appropriately used. Whether to simplify complex concepts, emphasize product features, or add a compelling opening or closing to your video that captures your brand identity, motion graphics can be a great asset to enhance your visual content.

08 Rendering and Distribution

We lift the complexity and time consumption of rendering and distribution off your shoulders. With extensive expertise in video post-production, we avoid the technical hurdles of rendering videos to any file format requested: Through meticulous technical quality review, we check for resolution, aspect ratio, etc., making sure your video is ready to be distributed. Whether you would like to upload your video to a video-sharing platform, embed it on your website, or distribute it through social media channels, we guarantee your video complies with the specific technical requirements of the intended distribution cha

What Makes us Different?

We are Multilingual

Besides being a one-stop shop for all your multimedia needs: pre-production, production, and post-production, Transbridge is a leading language service provider with a proven track record in video creation, editing, and post-production of multilingual videos. Not only do we provide subtitling, dubbing, and voiceover in 200+ languages, but also we bring extensive localization expertise to your multilingual audiovisual content; that is, we ensure every detail in your video such as fonts, colors, labels, symbols, and graphics remains consistent across all languages and is culturally relevant to your global target audience. Leveraging cutting-edge video editing and post-production software that has robust language support, we deliver videos of impeccable quality, tailored for any type of content and distribution channel.

We Care

We consider your success as ours! Client satisfaction has been and will always be our first priority. With this mindset, we believe effective communication is key to delivering excellent service, especially with services, such as multimedia post-production, that require multiple, versatile talents to work on a specific project.

Investing in creating effective communication tools, we provide a hassle-free service that exceeds your expectations.

Dedicated project manager: acting as a focal point of communication from the kickoff to project completion, closely collaborating with you to fully understand your specific requirements and customize our post-production solutions to match your budget and time frame.

Readability: Making sure formatting guidelines are strictly followed, including font size, style, color contrast, line breaks, and placement, delivering easy-to-read subtitles and a smooth user experience

Robust project management tools guaranteeing seamless workflow and smooth collaboration amongst all the diverse, global talents working on your multimedia project, avoiding costly delays and budget overruns.

We are all about Quality

From hiring exceptional talents with proven track record in delivering the highest quality (motion graphic designers, colorists, animators, sound designers, sound mixers, etc.) to using the latest data management tools for backing up vast amounts of data and ensuring they are efficiently organized, to implementing a multifaceted, meticulous quality assurance process, our post-production services revolve around our unwavering commitment to quality.

Our quality assurance process includes multiple checks and reviews at every stage of post-production:

Technical Checks

Making sure the technical specifications of the video (resolution, aspect ratio, file size and format, etc.) adhere and comply with the required standards and platform-specific requirements.

Content Review

Checking for overall consistency including color grading, ensuring audio is perfectly synchronized with the video, and editing/proofreading text overlays, titles, and subtitles for any grammar, syntax, or spelling errors.

Sound/Audio Checks

Ensuring balanced, high-quality audio mix so that dialogue/voiceover, music, and sound effects are clearly audible with no background noise.

Visual Effects and Graphics

Checking for any inconsistencies or errors in visual effects and animations, ensuring they are rendered correctly.

Final Playback

Watching the entire video in a simulation of how the target audience shall view it to implement a comprehensive review of all post-production aspects, guaranteeing immaculate quality of all audio and visual elements and ensuring they align with the client's vision and storyboard.

Client feedback and Final Review

Sending the video to the client to incorporate any final corrections. Upon approval, one last review is done before rendering the file to the desired format and distributing the video to the intended platforms/channels.
